

# Find Duplicates in Excel

This page teaches you how to find duplicate values (or triplicates) and how to find duplicate rows in Excel. It also covers removing duplicates with the Remove Duplicates tool.

## ◆ Find Duplicate Values

To find and highlight duplicate values in Excel, execute the following steps.

1. Select the range A1:C10.

	A	B	C	D
1	Sierra	Tango	Charlie	
2	Kilo	Bravo	Yankee	
3	Golf	Mike	Delta	
4	Juliet	Alpha	Foxtrot	
5	Papa	X-ray	November	
6	Zulu	Sierra	Whiskey	
7	Romeo	Echo	Quebec	
8	India	Oscar	Delta	
9	Sierra	Lima	Uniform	
10	Hotel	Juliet	Victor	
11

[Microsoft Excel](#) >

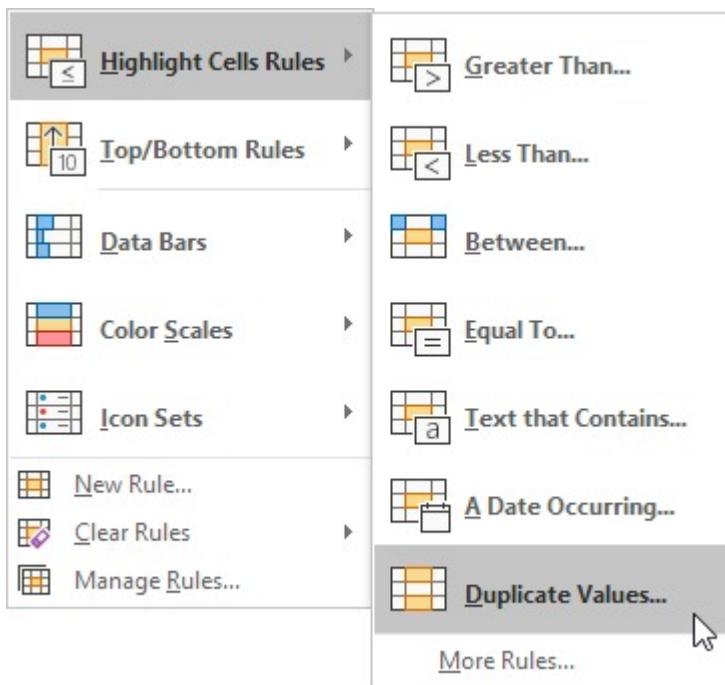

[Excel](#) >

[Data visualization software](#) >

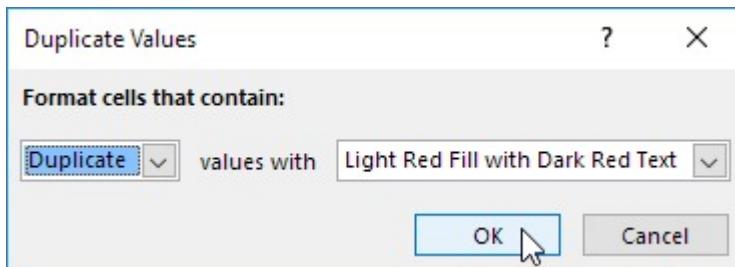

2. On the Home tab, in the Styles group, click Conditional Formatting.

3. Click Highlight Cells Rules, Duplicate Values.

4. Select a formatting style and click OK.

Result: Excel highlights the duplicate names.

	A	B	C	D
1	Sierra	Tango	Charlie	
2	Kilo	Bravo	Yankee	
3	Golf	Mike	Delta	
4	Juliet	Alpha	Foxtrot	
5	Papa	X-ray	November	
6	Zulu	Sierra	Whiskey	
7	Romeo	Echo	Quebec	
8	India	Oscar	Delta	
9	Sierra	Lima	Uniform	
10	Hotel	Juliet	Victor	
11				

Note: select Unique from the first drop-down list to highlight the unique names.

## ◆ Find Triplicates

By default, Excel highlights duplicates (Juliet, Delta), triplicates (Sierra), etc. (see previous image). Execute the following steps to highlight triplicates only.

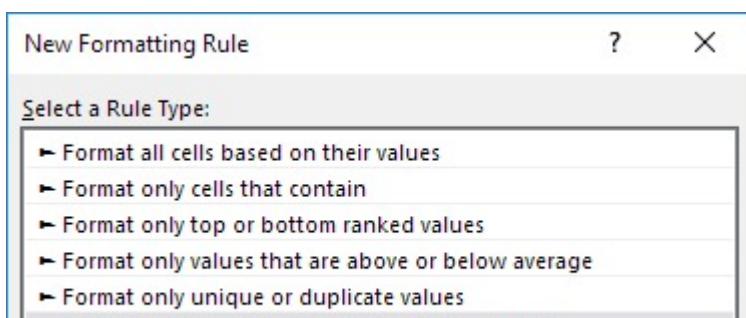

1. First, [clear](#) the previous conditional formatting rule.
2. Select the range A1:C10.
3. On the Home tab, in the Styles group, click Conditional Formatting.

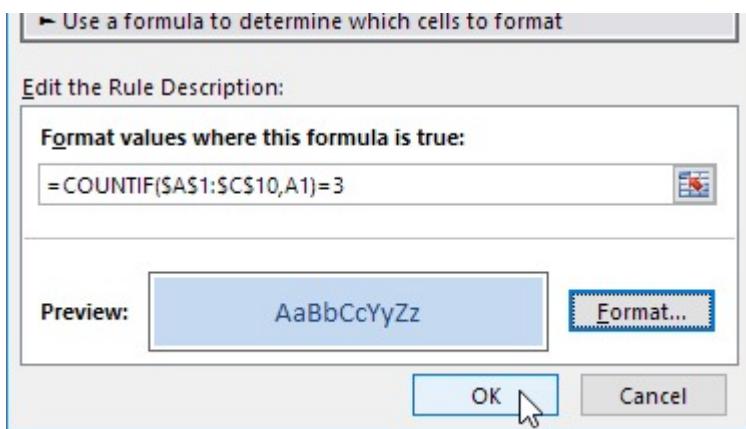

4. Click New Rule.

5. Select 'Use a formula to determine which cells to format'.
6. Enter the formula =[COUNTIF\(\\$A\\$1:\\$C\\$10,A1\)=3](#)
7. Select a formatting style and click OK.

Result: Excel highlights the triplicate names.

	A	B	C	D
1	Sierra	Tango	Charlie	
2	Kilo	Bravo	Yankee	
3	Golf	Mike	Delta	
4	Juliet	Alpha	Foxtrot	
5	Papa	X-ray	November	
6	Zulu	Sierra	Whiskey	
7	Romeo	Echo	Quebec	
8	India	Oscar	Delta	
9	Sierra	Lima	Uniform	
10	Hotel	Juliet	Victor	
11				

Explanation: =COUNTIF(\$A\$1:\$C\$10,A1) counts the number of names in the range A1:C10 that are equal to the name in cell A1. If COUNTIF(\$A\$1:\$C\$10,A1) = 3, Excel formats cell A1. Always write the formula for the upper-left cell in the selected range (A1:C10). Excel automatically copies the formula to the other cells. Thus, cell A2 contains the formula =COUNTIF(\$A\$1:\$C\$10,A2)=3, cell A3 contains the formula =COUNTIF(\$A\$1:\$C\$10,A3)=3, etc. Notice how we created an [absolute reference](#) (\$A\$1:\$C\$10) to lock this reference.

Note: you can use any formula you like. For example, use =COUNTIF(\$A\$1:\$C\$10,A1)>3 to highlight names that occur more than 3 times.

## ◆ Find Duplicate Rows

To find and highlight duplicate rows in Excel, use COUNTIFS (with the letter S at the end) instead of COUNTIF.

1. Select the range A1:C10.

	A	B	C	D
1	Leopard	Africa	Zambia	
2	Lion	Africa	South Africa	
3	Elephant	Asia	Thailand	
4	Leopard	Asia	India	
5	Rhino	Africa	South Africa	
6	Buffalo	Asia	Cambodia	
7	Lion	Africa	South Africa	

8	Rhino	Asia	Nepal
9	Buffalo	Africa	South Africa
10	Elephant	Africa	Botswana
11			

2. On the Home tab, in the Styles group, click Conditional Formatting.

3. Click New Rule.

4. Select 'Use a formula to determine which cells to format'.

5. Enter the formula =COUNTIFS(Animals,\$A1,Continents,\$B1,Countries,\$C1)>1

6. Select a formatting style and click OK.

Note: the [named range](#) Animals refers to the range A1:A10, the named range Continents refers to the range B1:B10 and the named range Countries refers to the range C1:C10.

=[COUNTIFS](#)(Animals,\$A1,Continents,\$B1,Countries,\$C1) counts the number of rows based on multiple criteria (Leopard, Africa, Zambia).

Result: Excel highlights the duplicate rows.

Explanation: if  $\text{COUNTIFS}(\text{Animals}, \$\text{A1}, \text{Continents}, \$\text{B1}, \text{Countries}, \$\text{C1}) > 1$ , in other words, if there are multiple (Leopard, Africa, Zambia) rows, Excel formats cell A1. Always write the formula for the upper-left cell in the selected range (A1:C10). Excel automatically copies the formula to the other cells. We locked the [reference](#) to each column by placing a \$ symbol in front of the column letter (\$A1, \$B1 and \$C1). As a result, cell A1, B1 and C1 contain the same formula, cell A2, B2 and C2 contain the formula

=[COUNTIFS](#)(Animals,\$A2,Continents,\$B2,Countries,\$C2)>1, etc.

## ◆ Remove Duplicates

Finally, you can use the [Remove Duplicates](#) tool in Excel to quickly remove duplicate values or duplicate rows. On the Data tab, in the Data Tools group, click Remove Duplicates.

In the example below, Excel removes all identical rows (blue) except for the first identical row found (yellow).

Note: visit our page about [removing duplicates](#) to learn more about this great Excel tool.
